

AMERICA'S POWER:

Coal Provides Jobs and Affordable Electricity

Coal powers nearly half of America's electricity—more than twice any other source. And consumers that get most of their electricity from coal have some of the nation's most affordable electricity costs.

More than 130,000 people are directly employed in U.S. coal mining in 25 states at wages that are more than 60 percent higher than the average wage for all Americans.

Find how important coal is to your state at www.nma.org.

**Providing affordable power and good jobs—
that's America's Power—that's Coal.**
